Temperature ONLY!
SwemaTemp 20 is a display instrument for temperature and connects to SWT 315.

Temperature, Humidity and ventilation.
Swema 3000 is a powerful instrument that can connect a temperature, humidity or ventilation probe. There are four models, all with data storing and logging functions.

It is easy to transfer data to a computer and create a diagram in a spreadsheet.

764.200 Swema 3000

764.201 Swema 3000d with inbuilt barometer and a Type K connector for Thermo couple temperature

764.202 Swema 3000md with inbuilt barometer, Type K connector and -300...+1.500 Pa differential pressure sensor for air.

764.203 Swema 3000mdH+ with inbuilt barometer, Type K connector and ± 8000 Pa differential pressure sensor for air

SWT 315, measuring surface temperature of a drying cylinder. A 10m extension cable connects to a Swema 3000 or SwemaTemp 20.

Paper Machine cylinder SWT 315 surface temperature

SWT 315 is a contact temperature probe for the handheld instruments SwemaTemp 20 and Swema 3000.

SWT 315 runs on a 4-wheel wagon direct on the cylinder surface. SWT 315 is specially developed and tested for the paper industry in liaison with the Technical Institute of Lund, Sweden. It gives fast and accurate measurements of the surface temperature on drying cylinders in modern paper machines. The floating joint allows for a smooth run on the cylinder at different angles of the telescopic shaft. Due to the fact that the sensor is virtually in contact with the cylinder, with the protection for the sensor being a strong flexible metal wafer, the SWT 315 offers outstanding accuracy at high paper velocity. The sensor contact with the paper cylinder produces no adverse effects, the small amount of generated friction heat (1°C) is simply transferred to the air.

Technical data:

SWT 315:

Temperature: 0...200°C

Accuracy: $\pm 2^\circ\text{C}$ or $\pm 1,5\%$ R.V.

Max speed SWT 315: 2000 m/min

Response time: SWT 315: $T_{90} = 7$ sek,

Min cylinder diameter: 150 mm

Telescopic shaft: 1...2 m

telescope assembly and
steel sinter filter

SWA 16 is a probe for Swema 3000 specially developed for relative humidity measurements 0...100%RH up to 150°C inside paper machines. High humidity values indicates a humidity pocket with poor ventilation. It also calculates the dew point and the water content by weight.

Measurement protocols and loggings can be stored and transferred to a PC.

Technical data:

SWA 16 connects to Swema 3000 with two holders and a connection cable

Relative humidity 10...90 %RF

±1,5%RH at 23°C

± 2%RF at -10...+10°C, 30...50°C

± 2,5%RF at 50...70°C

± 3,5%RF at 70...150°C

± 3%RF at -20...-10°C

Relative humidity: 0...10, 90...100 %RF

± 2,5 %RH at <10, >90 %RH at 23°C

Temperature: -20...+150°C

± 0,3°C at 23°C

Length probe: 120 mm stainless steel

Ø probe: 15 mm

Cable length: 10m

764.202
Swema 3000md

764.203
Swema 3000mdH+

Technical data:

Media: Clean air, Temperature 0...50°C
resolution: adjustable down to 0,01 Pa

Swema 3000md, SWA 10:

Differential pressure: -300...1 500Pa
3000md: $\pm 0,3\%$ read value, minimum $\pm 0,3$ Pa
SWA 10: $\pm 1\%$ read value, minimum $\pm 0,3$ Pa
Max overload $\pm 20\ 000$ Pa
Air velocity 2...49 m/s

SWA07:

Differential pressure: $\pm 7\ 000$ Pa
After zeroing: $\pm 0,3$ Pa $\pm 2\%$ read value
Max load $\pm 35\ 000$ Pa
Air velocity approx. 2...100 m/s
Resolution: adjustable down to 0,01 Pa
Position dependency: approx. 5Pa

Swema 3000mdH+:

Differential pressure: $\pm 8\ 000$ Pa
Air velocity approx. 2...110 m/s
 $\pm 1\%$ read value, minimum $\pm 0,4$ Pa
Max overload $\pm 100\ 000$ Pa

By connecting a pitot static pipe the instrument measures air velocity. The instrument can also automatically calculate the air flow when the area is known. Swema 3000md and SWA 10 measures pressure with high accuracy. An inbuilt valve automatically zero checks the pressure before saving the values. This function gives a fully position independent probe that makes them suitable for both field and laboratory measurements. Swema 3000mdH+ is a special version with higher pressure range: $\pm 8\ 000$ Pa.

SWA 07 has a wider pressure range than SWA 10 and Swema 3000md. However SWA 07 needs to be zero adjusted in its measuring position.

SWA 07 has no inbuilt valve and therefore the pressure needs to be disconnected before zeroing.

Surface Temperature on cylinders - Fixed installation - CTE 60

SwemaTemp 20 is a surface temperature sensor for running cylinders up to approx. 400 m/min. For continuous measuring on drying cylinders in paper machines, during production or test, CTE60 indicates the temperature and aids you in detecting condense water. Designed for fixed installation, CTE 60 works well on shiny or rough surfaces and works completely without contact.

The distance to the cylinder surface is adjusted to 1 to 2mm with a lockable screw on the sensor arm. The CTE 60 has a foldable arm with one position for measuring and one for maintenance.

260.061 CTE 60 P, Pt100 Temp. probe
260.060 CTE 60 N, Ni100 Temp. probe
260.063 CTE 60 P2, 2xPt100 Temp. probe
260.062 CTE 60 N2, 2xNi100 Temp. probe
1m cable, 2x0,75mm² wires,
specify other length or cable if needed

Technical data:

Temperature: 0...200°C
Max cable temperature: 180°C
Max velocity: 400 m/min
Min cylinder diameter
800 mm as standard
250 mm, modified on special order

Accuracy:

Pt 100: Class A: $\pm(0,15 + 0,002|t|^{*})$
Ni 100: 1/2 DIN $\pm(0,2 + 0,0035|t|^{*})$
t in °C

CTE 60 connects to transmitter for mA or
Voltage output
